$$\frac{r_n}{DP_n} = \frac{0}{(0)}$$

DATA \_\_\_\_\_

$$\begin{matrix} V(0) & \xleftarrow{\hspace{-1cm}} & . & . & . & . & . & . & . & . \\ V(1) & \xleftarrow{\hspace{-1cm}} & . & . & . & . & . & . & . & . \end{matrix}$$

Viterbi Trellis

1. Fill in values for the  $r_n$  samples in the spaces provided. Draw the corresponding waveform in the sample space, if desired.
2. Compute the  $DP_n$  using the metric relations shown at the top of the form.
3. Fill in the Viterbi trellis using diagram for case 1), 2) or 3).
4. Decode, using NRZI ( $1 - D$ ), or NRZ decoding rules. Record results on 'DATA' line.
